Sutherland-Hodgman Algorithm

Sutherland-Hodgman Clipping

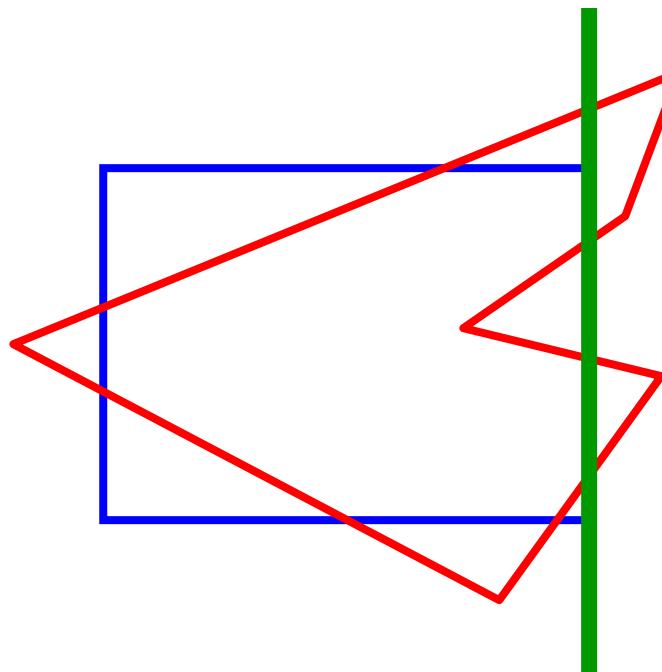

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

Sutherland-Hodgman Clipping

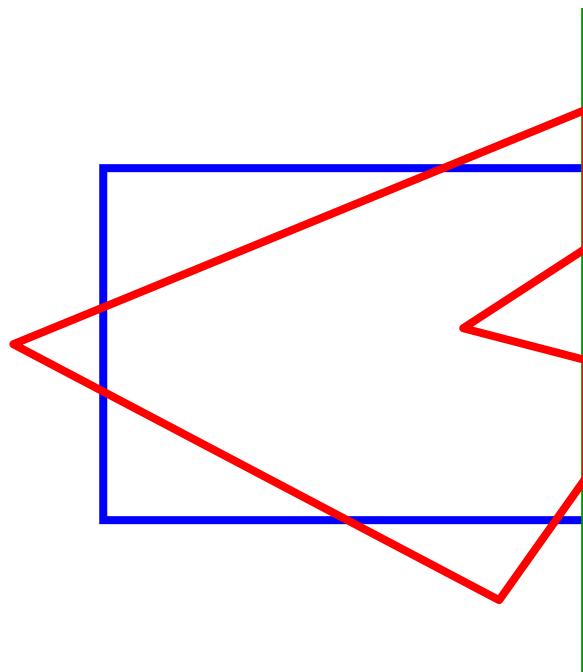

- ▶ Basic idea:

- consider each edge of the view window individually
- clip the polygon against the view window edge's equation

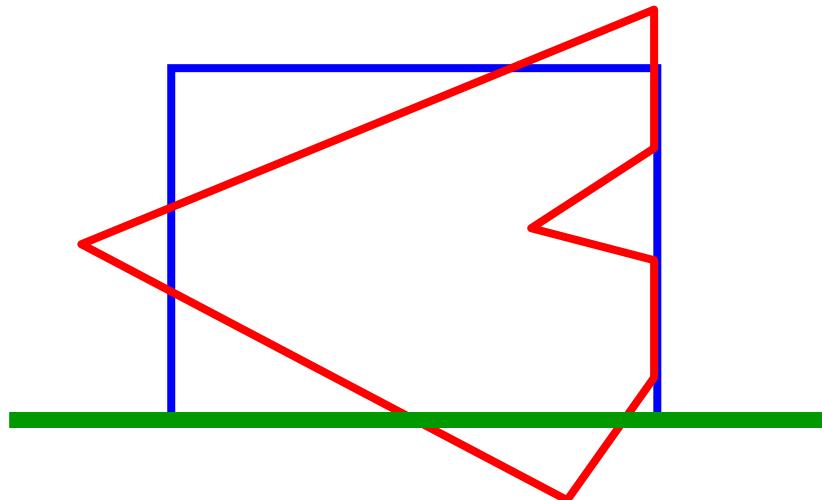

Sutherland-Hodgman Clipping

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

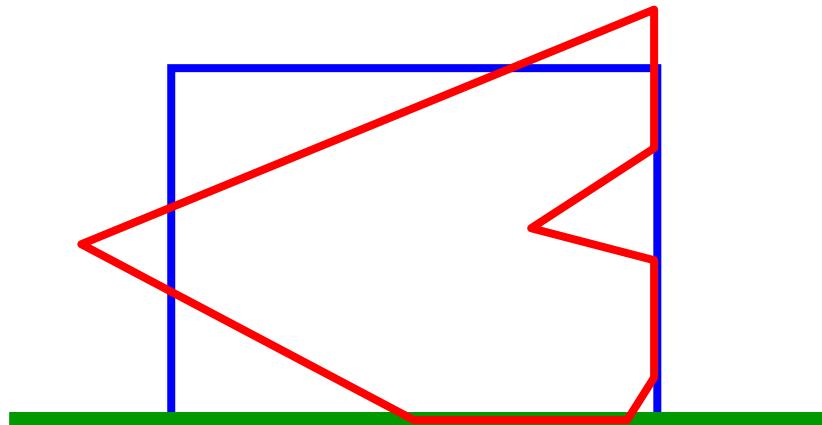

Sutherland-Hodgman Clipping

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

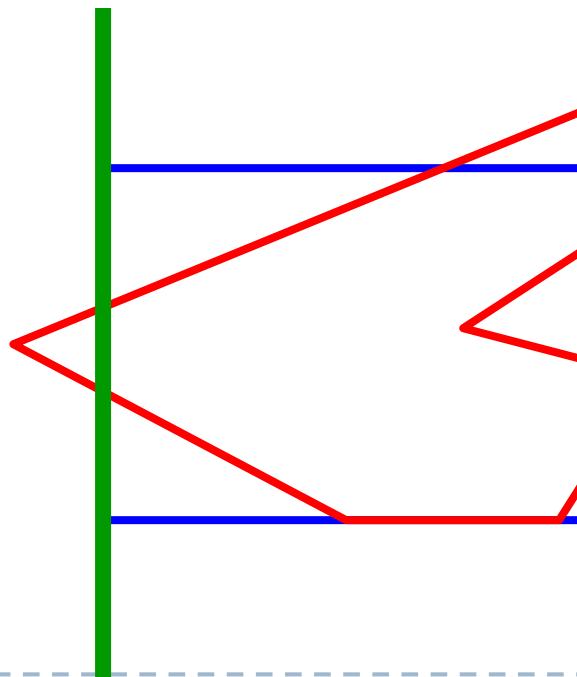

Sutherland-Hodgman Clipping

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

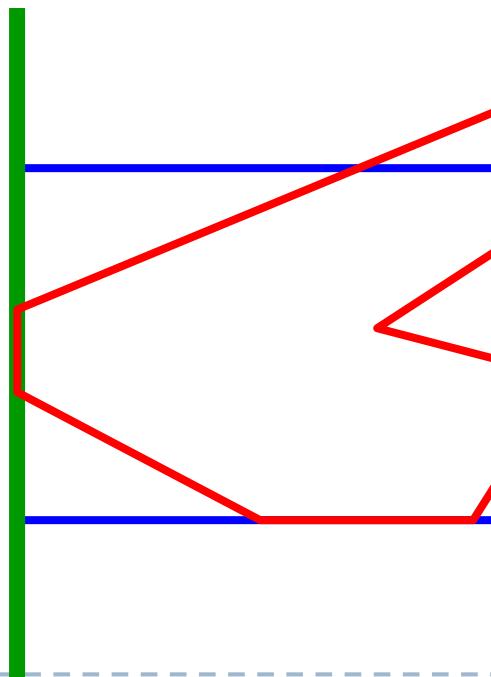

Sutherland-Hodgman Clipping

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

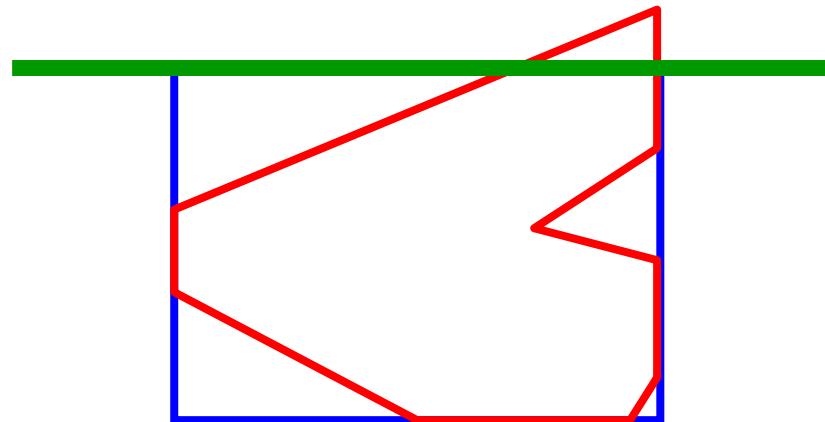

Sutherland-Hodgman Clipping

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

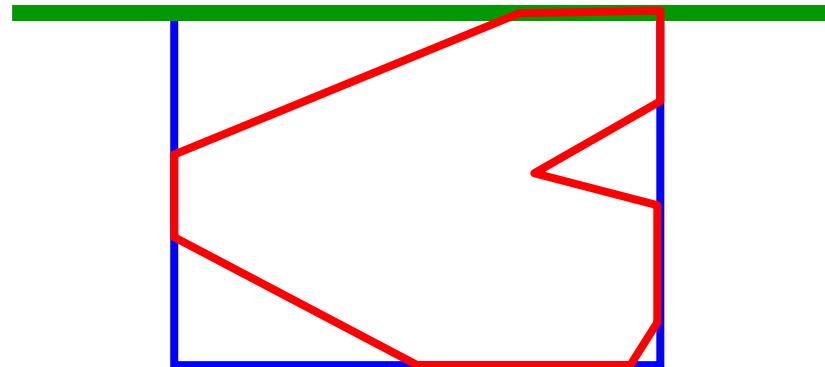

Sutherland-Hodgman Clipping

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

Sutherland-Hodgman Clipping

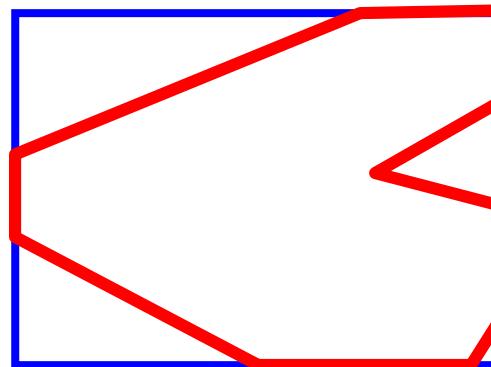

- ▶ Basic idea:
 - consider each edge of the view window individually
 - clip the polygon against the view window edge's equation

Sutherland-Hodgman Clipping

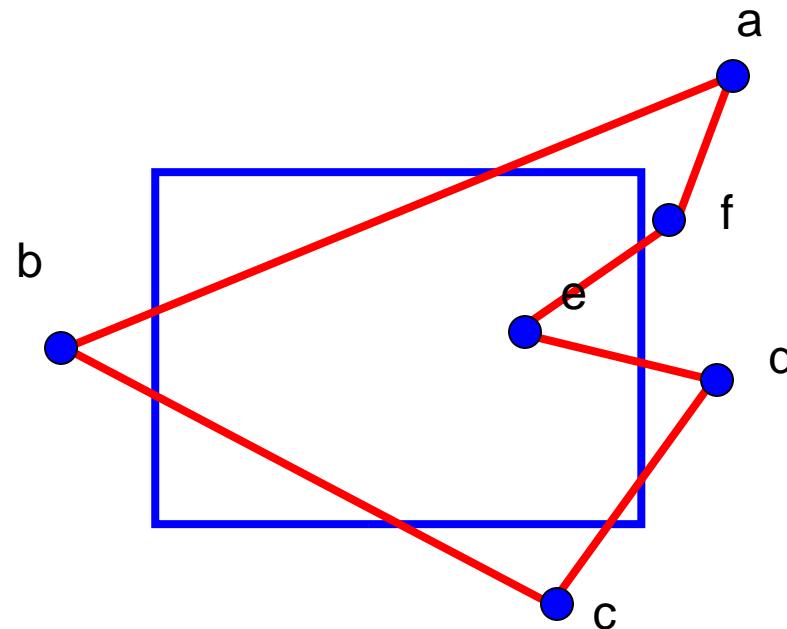

- ▶ Basic idea:

- consider each edge of the view window individually
- clip the polygon against the view window edge's equation
- after doing all edges, the polygon is fully clipped

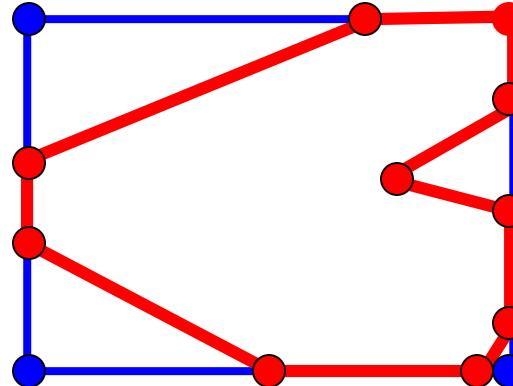

Sutherland-Hodgman Clipping

- ▶ Input/output for algorithm:
 - input: list of polygon vertices in order
{abcdef}

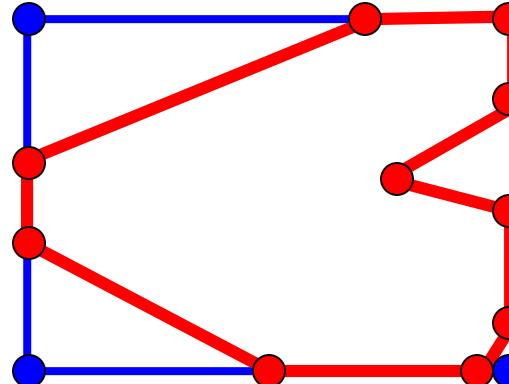

Sutherland-Hodgman Clipping

- ▶ Input/output for algorithm:
 - input: list of polygon vertices in order
 - output: list of clipped polygon vertices consisting of old vertices (maybe) and new vertices (maybe)

Sutherland-Hodgman Clipping

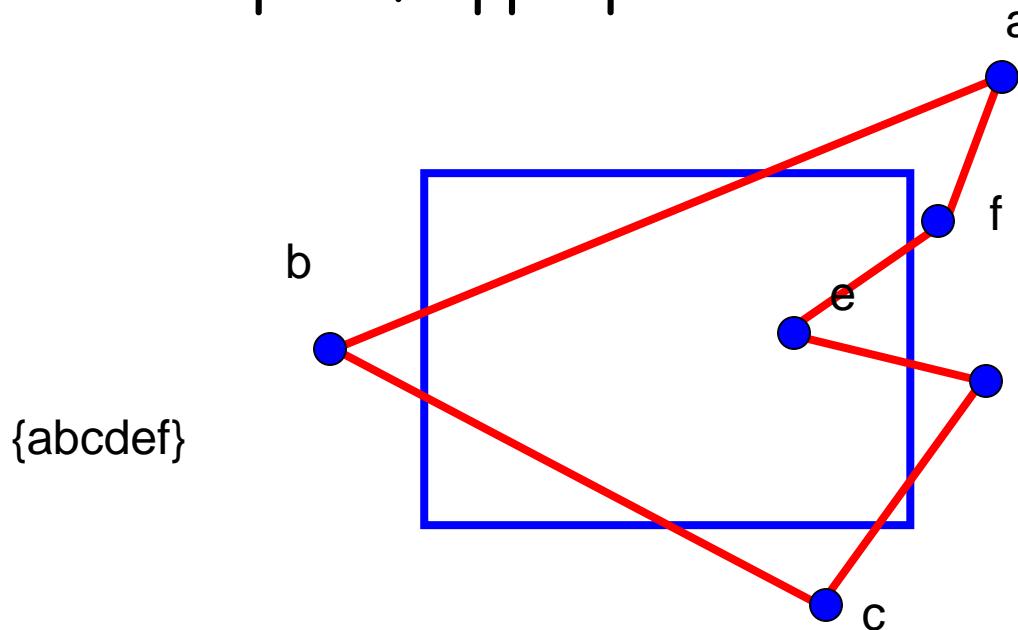

- ▶ Input/output for algorithm:
 - input: list of polygon vertices in order
 - output: list of clipped polygon vertices consisting of old vertices (maybe) and new vertices (maybe)
 - exactly what expect from the clipping operation against each edge!

Sutherland-Hodgman Clipping

► Basic routine:

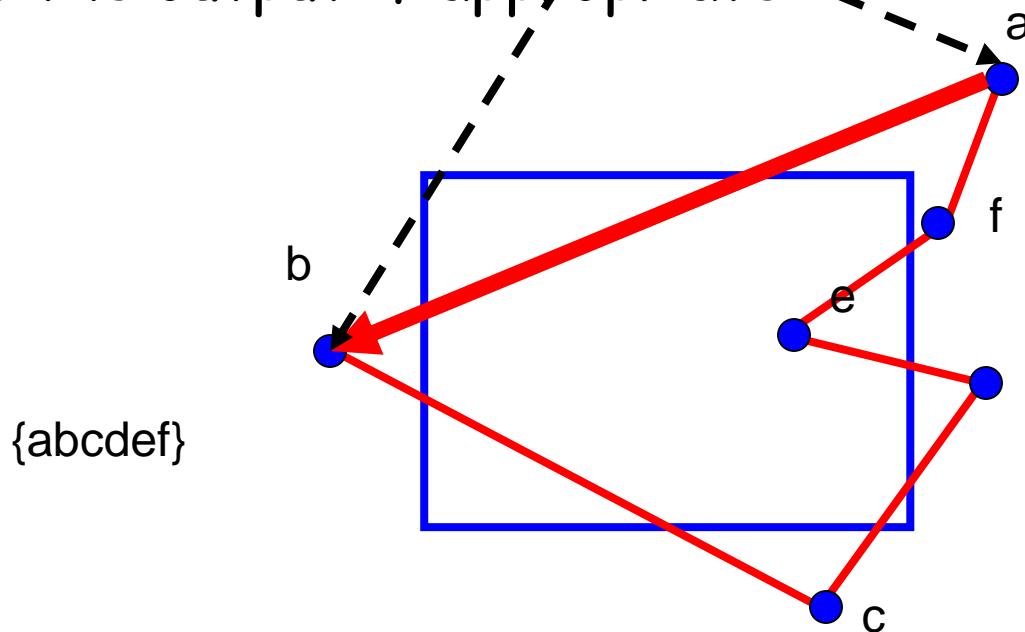

- Go around polygon one vertex at a time
- Current vertex has position E
- Previous vertex had position S , and it has been added to the output if appropriate

Sutherland-Hodgman Clipping

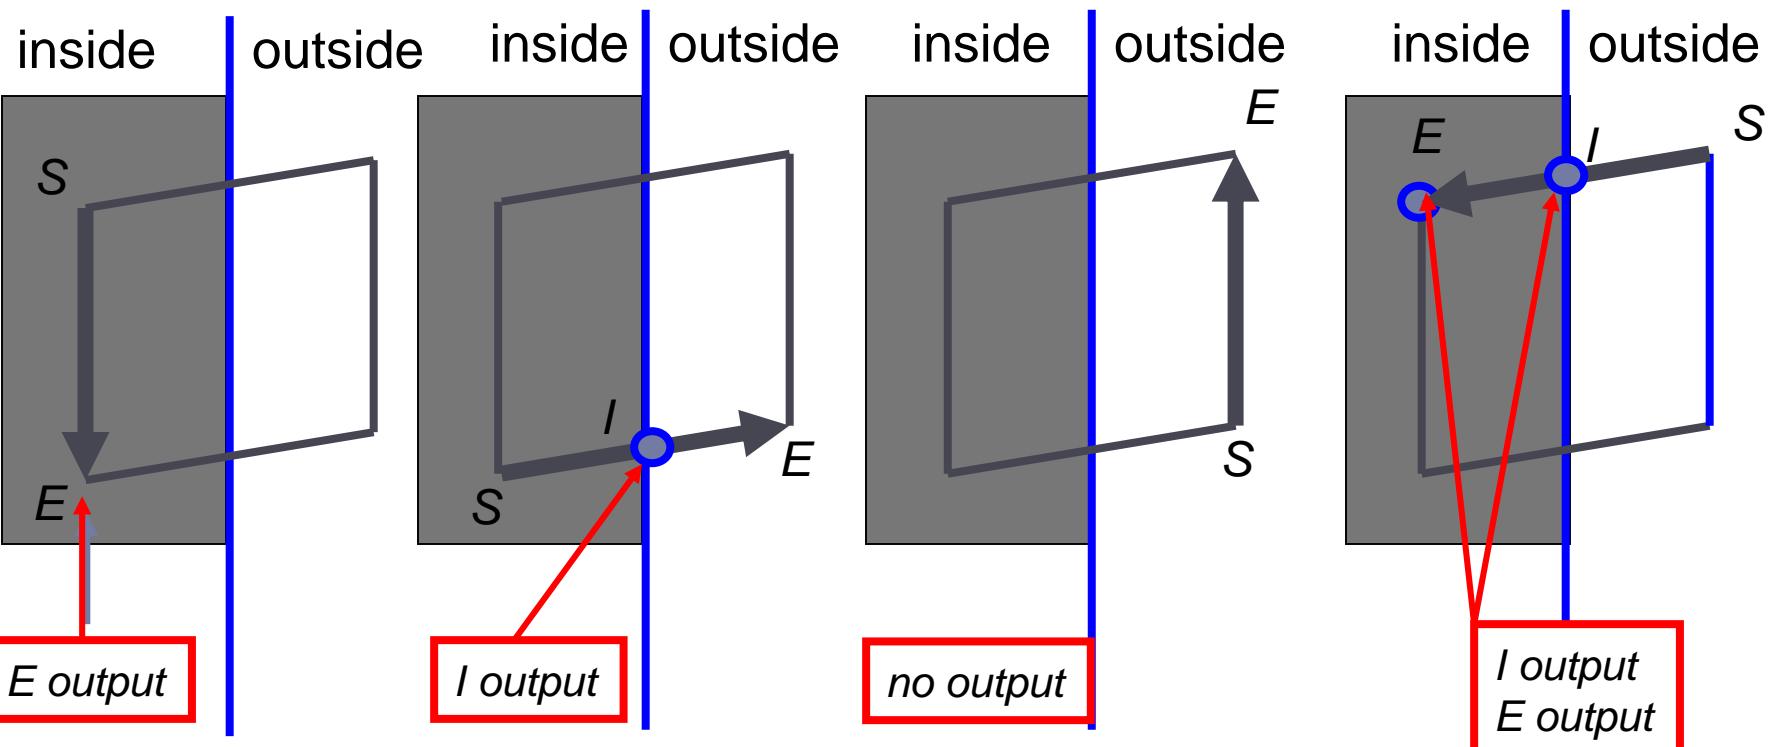

► Basic routine:

- Go around polygon one vertex at a time
- Current vertex has position E
- Previous vertex had position S , and it has been added to the output if appropriate

Sutherland-Hodgman Clipping

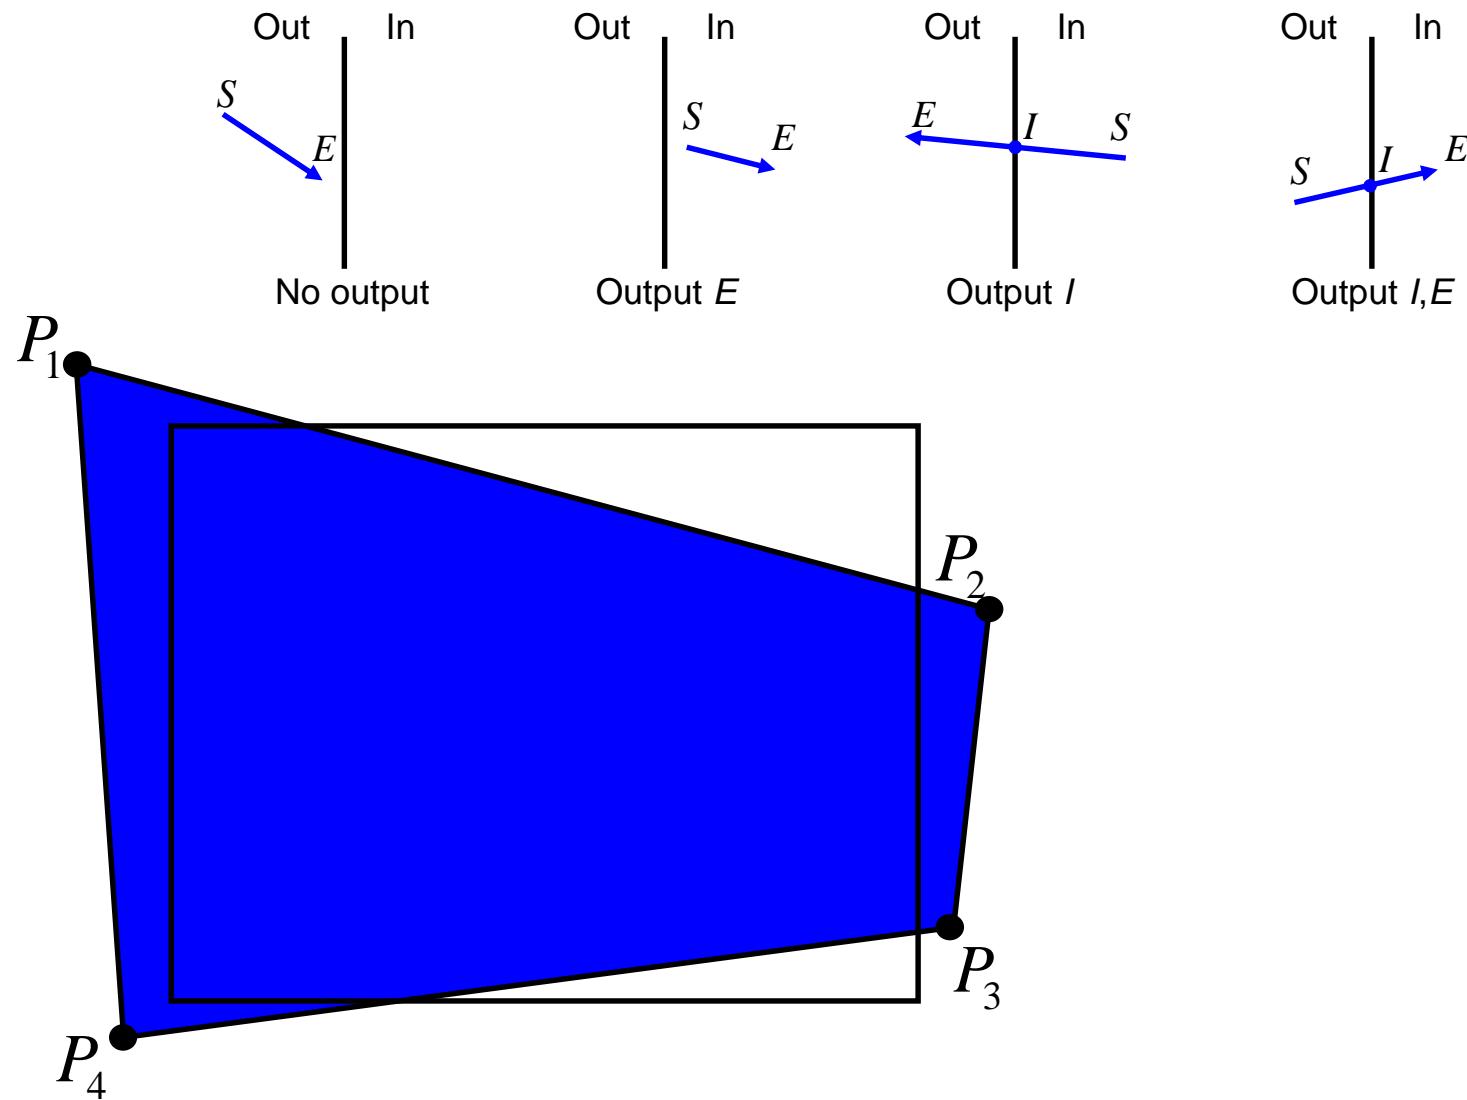

- Edge from S to E takes one of four cases:

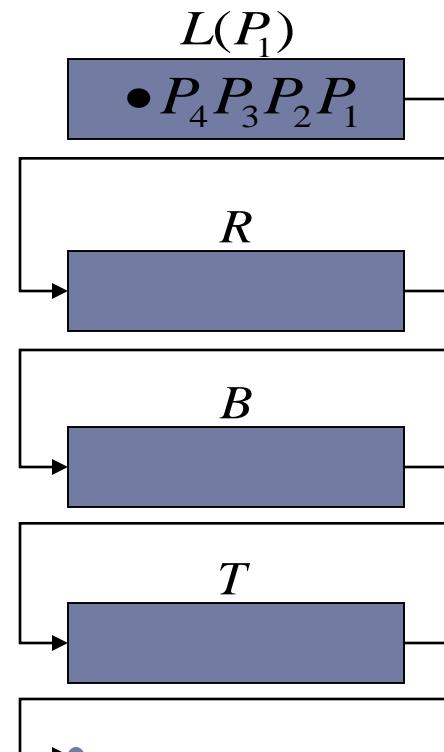

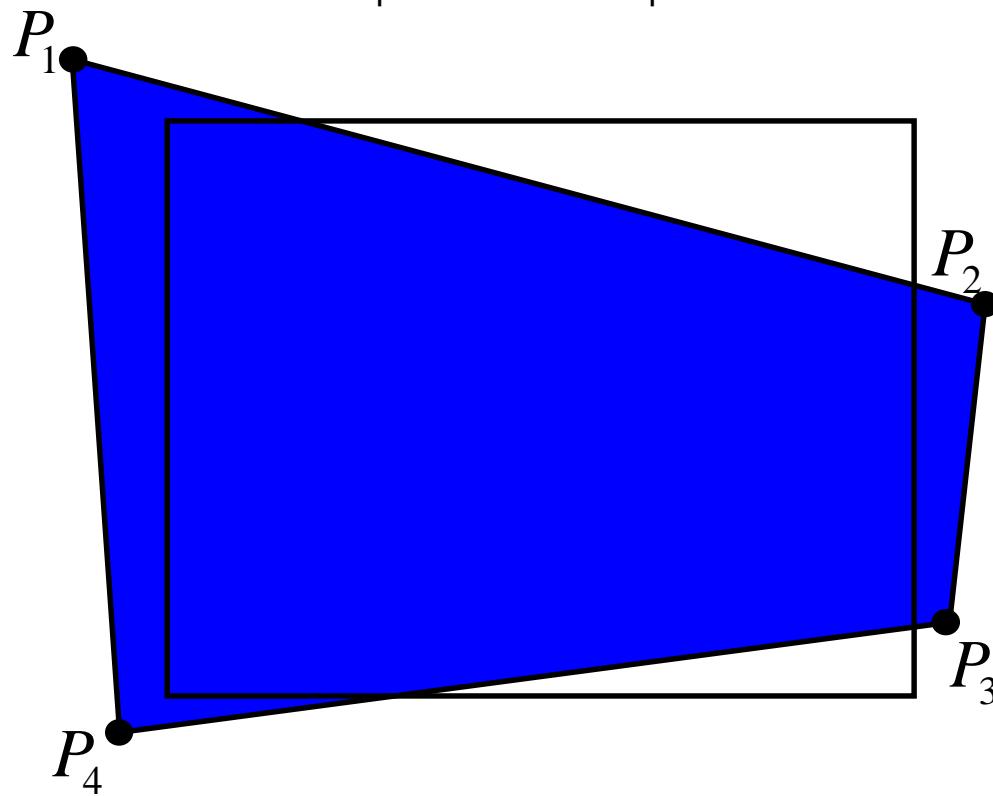

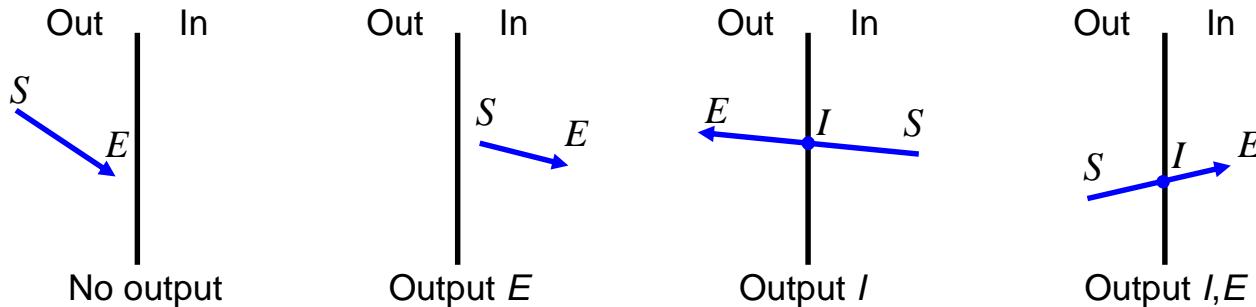

Sutherland-Hodgman Clipping

- ▶ Four cases:
 - ▶ S inside plane and E inside plane
 - ▶ Add E to output
 - ▶ Note: S has already been added
 - ▶ S inside plane and E outside plane
 - ▶ Find intersection point I
 - ▶ Add I to output
 - ▶ S outside plane and E outside plane
 - ▶ Add nothing
 - ▶ S outside plane and E inside plane
 - ▶ Find intersection point I
 - ▶ Add I to output, followed by E

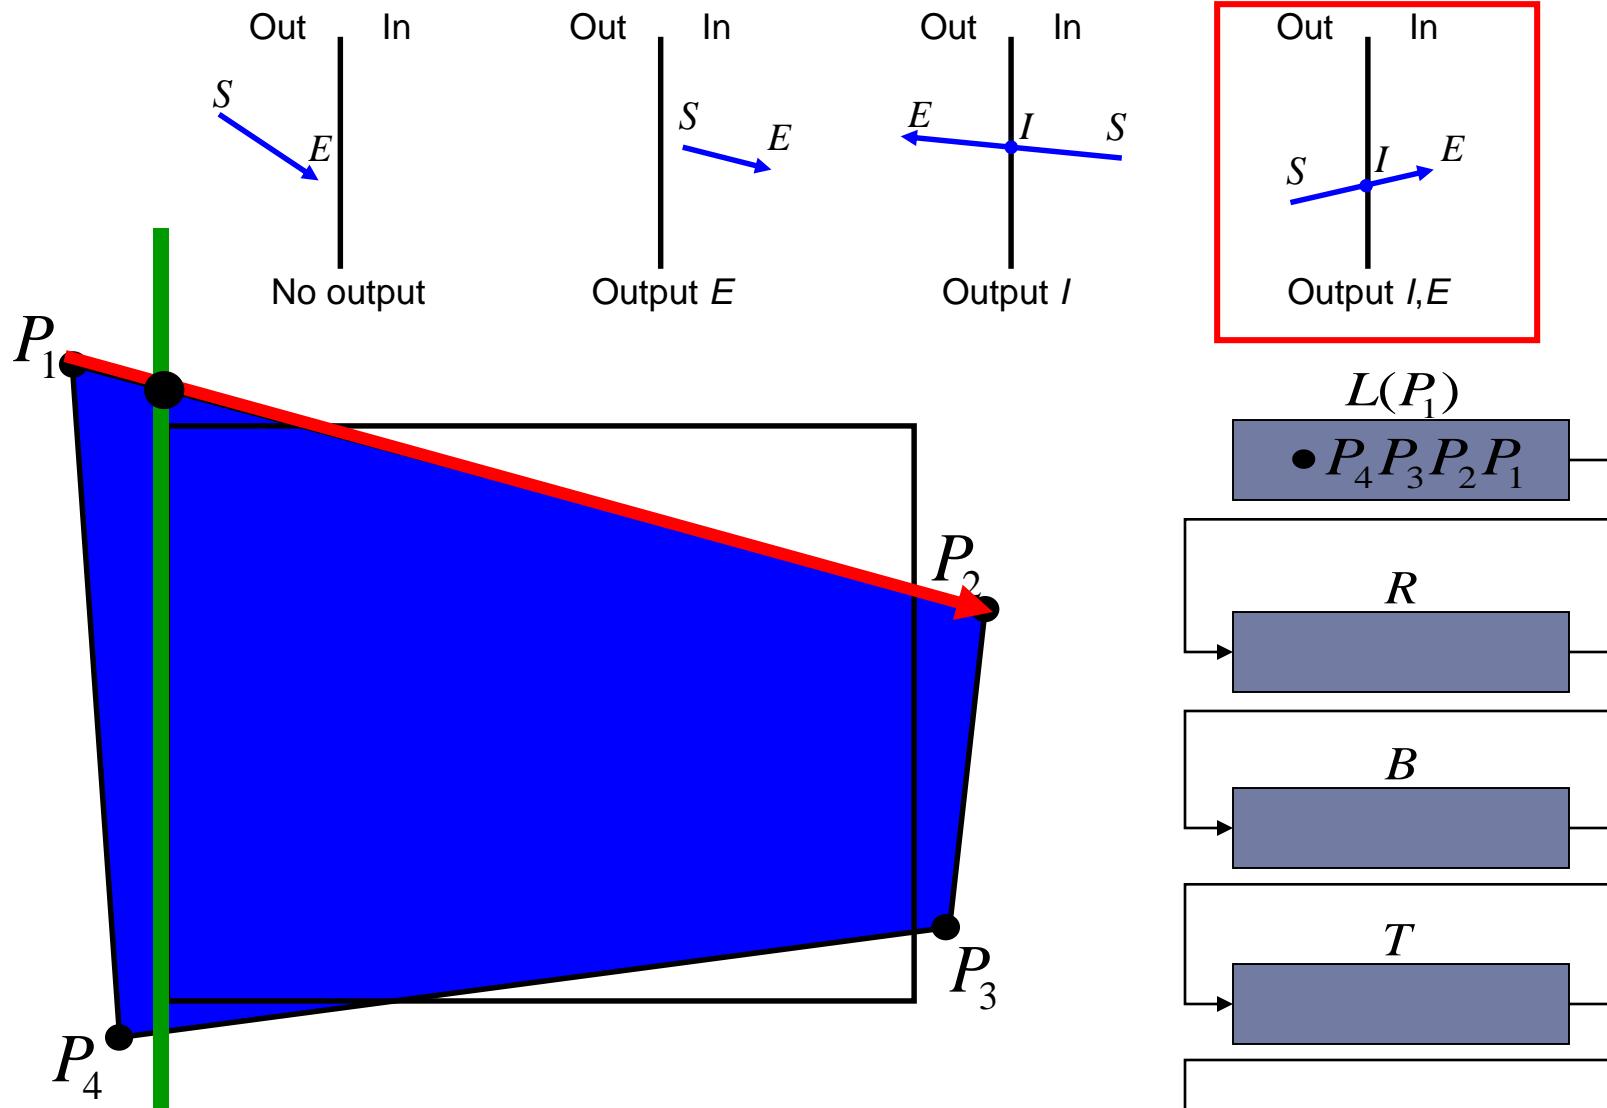

Sutherland-Hodgman Algorithm

Possible error for
non-convex
polygons

• baP_2dcP_5 yota@inf.uth.gr

Sutherland-Hodgman Algorithm

- ▶ Easy to pipeline for parallel processing
- ▶ Polygon from one boundary does not have to be complete before next boundary starts
- ▶ Leads to substantial performance gains

Weiler-Atherton Algorithm

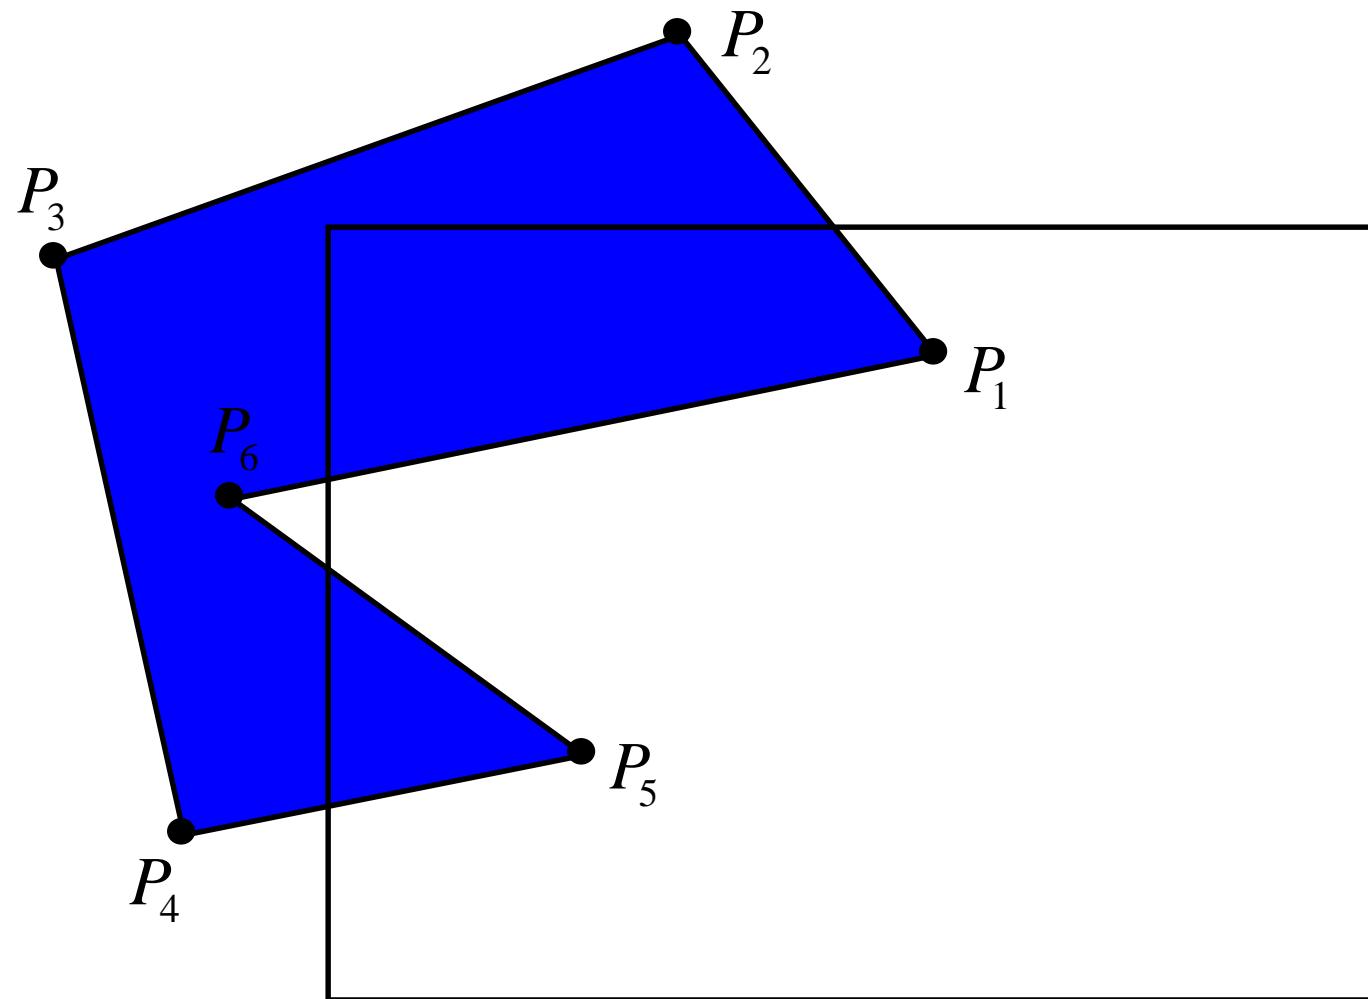

Weiler-Atherton Algorithm

- ▶ General polygon vs. polygon clipping
 - ▶ Handles non-convex shapes
-
- ▶ Not as efficient as Sutherland-Hodgman
 - ▶ Not easy to parallelize

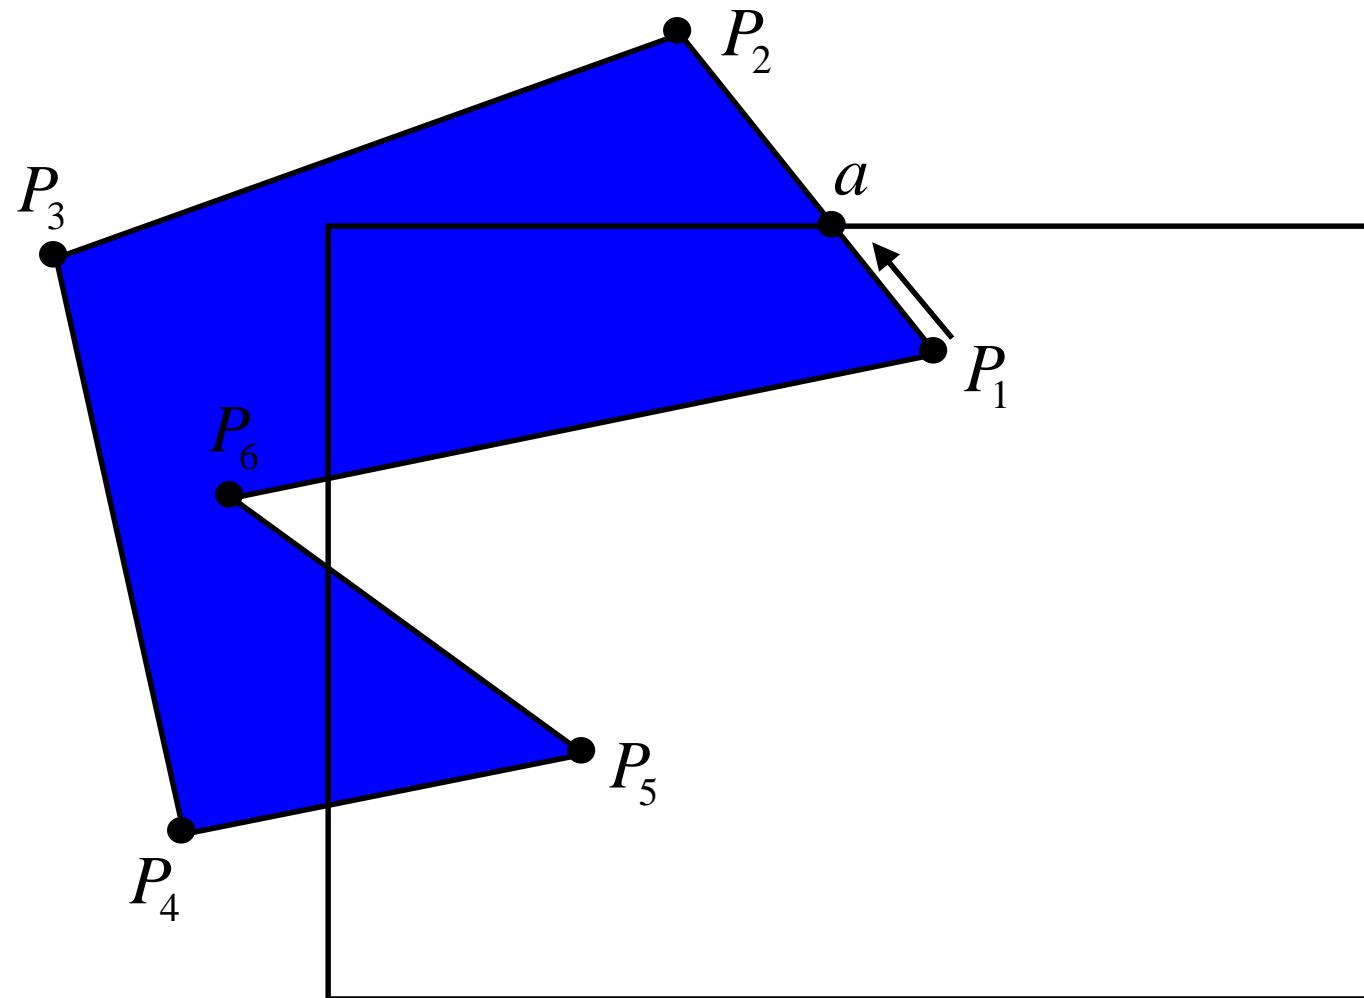

Weiler-Atherton Algorithm

- ▶ Process the edges of the polygon fill area in a counterclockwise order until an inside-outside pair of vertices is encountered
- ▶ Follow the window boundaries in a counterclockwise direction from the exit-intersection point to another intersection point with the polygon
 - previously processed?
 - yes, go to the next step
 - no, continue processing polygon until a previously processed vertex is encountered
- ▶ Form the vertex list for this section of the clipped fill area
- ▶ Return to the exit-intersection point and continue processing the polygon edges in a counterclockwise order
